

DEACOM®

Integrated Accounting & ERP Software

Since 1995, manufacturers throughout the United States have used the powerful DEACOM Enterprise Resource Planning (ERP) system to solve their most challenging business problems. The DEACOM system is engineered specifically to manage the complex job costing and business process issues faced by modern manufacturing companies. The software is designed to handle a nearly endless variety of unique requirements without costly customization.

Built with its own integrated accounting and financials, DEACOM provides seamless and real-time transactional posting.

Flexible order entry, accurate inventory control, easy job costing and completely integrated financials help control the details of complex businesses. The DEACOM solution includes software, installation and ongoing training and professional support.

Deacom, Inc. produces accounting and ERP software for mid-range manufacturing companies, focusing on two primary vertical markets:

- Manufacturers of prefabricated building components, building products, and materials.
- Process and mixed-mode manufacturers with an emphasis on paints, inks & coatings; cosmetics; food & beverage; pharmaceuticals and other chemicals.

Deacom builds mission-critical software that integrates your entire company. By continually focusing on making complex issues simple, Deacom helps streamline your business processes to help maximize productivity and profitability.

Contact Deacom today for a free web demonstration of how the system can work for you.

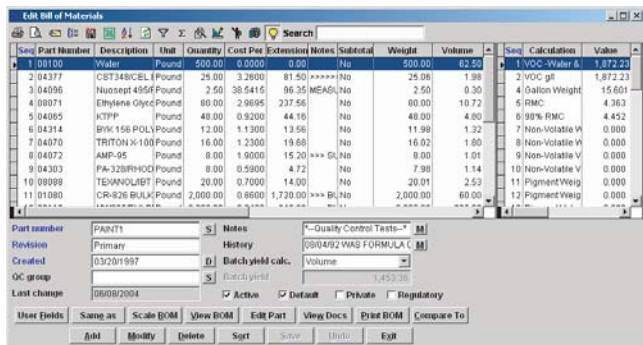

Complexity Made Simple

Comprehensive, integrated functional areas within the DEACOM system allow you to seamlessly link all departments together.

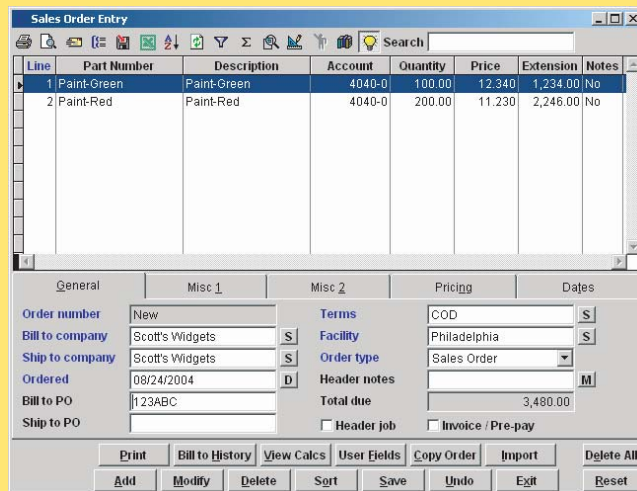

Software to Integrate Your Entire Company

Formula Management

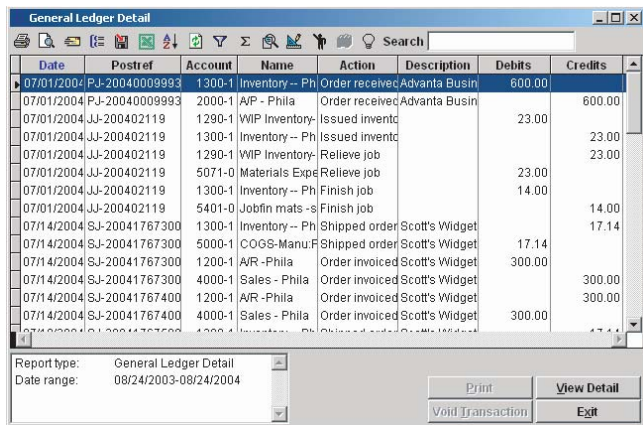

- Completely integrated formula management module allows changes to formulas to instantly impact inventory and production requirements and planning.
- Infinitely configurable, user-definable calculations and user fields allow lab functions to be done in your own style.
- Formulation values automatically drive MSDS, emissions and other regulatory reporting.

Order Processing

- Input orders directly at the plant or through the integrated POS system.
- Orders instantly appear as demand in inventory and MRP reporting.
- Automatically generate backorders as required.
- Configurable order entry handles unique requirements without customization.
- Generate multiple order report formats such as pick tickets, packing lists, bills of lading, invoices and others.
- E-mail or fax order confirmations.
- Group together like items for convenient order entry.
- Group sales orders as projects to determine overall profitability and revenues.

Accounting

- Real-time accounting postings allow instant access to financial results.
- Drill down to transactional details from accounting summaries and reports.
- Configurable structures allow for reporting by profit center, division, location or other business entity.
- A/R, A/P, labor tracking, inventory control and job costing all flow directly into the general ledger.

The DEACOM Enterprise Resource Planning (ERP) system seamlessly integrates all areas of your company — from production and labor tracking to order entry and invoicing — giving you a comprehensive view of your entire operation. DEACOM lets you manage your business your way... simply and efficiently.

DEACOM®

Software for Process & Mixed-Mode Manufacturers

The DEACOM system seamlessly integrates all areas of your business into one simple solution.

Regulatory Reporting

- Calculate hazardous materials, gather data and comply with SARA reporting requirements easily.
- Automatically create Material Safety Data Sheets (MSDS) based on actual ingredients used in each formulation.
- Create MSDS template forms using shared data groups for ease of maintenance.
- Create QC test groups with test ranges and target values. Permanently store results for reporting.
- Track revisions to formulas to know exactly how a product was made in each batch.

Order Entry

- Configurable order entry.
- Built-in sales analysis, reporting and commission calculation tools.
- Support an infinite number of ship-to locations for each billing account.
- Calculate available-to-sell quantity automatically during order entry.
- Automatic real-time posting to general ledger and accounts receivable.
- Calculate, collect and pay sales and use taxes for multiple tax regions.
- Print customizable packing lists, bills of lading, pick lists, invoices, customer statements, etc.

- Enter notes to print on delivery tickets or invoices.
- Set up deal pricing by customer, salesman, product, product group, cost plus, list minus, etc.
- Sell from multiple warehouses and view inventory on hand for each warehouse.
- Configure custom items using a visual feature tree.

Accounting

- Real-time system with posting done automatically.
- Create an infinite number of custom financial statements.
- View financial data based on any time period desired.
- Track A/R, A/P cash receipts and disbursements.
- Drill down to transactional detail from summary views.
- Create any style account numbering format for divisional or location reporting.
- Do online bank account reconciliation.
- Create journal entries, recurring and reversing entries.
- Print checks to laser or dot-matrix checks, short pay, over pay, take deductions and void transactions.
- Create budgets and compare to actual results.
- Manage large projects using progress billing to generate invoices based on percent completion.

Production

- Create jobs for stock or linked to sales orders.
- Easily calculate actual job costs with materials, labor, machine costs, purchases and overhead.
- View live data showing each worker's current task.
- Determine bottlenecks based on loading of work centers.
- Generate routing and consolidated pick lists for jobs.
- Track accumulated hours on each job and show remaining hours and estimated completion date.
- Visually schedule jobs using drag-and-drop calendar tools.
- Schedule by separate production facilities, different product categories and other user-defined criteria.

Laboratory

- Completely integrated formula management module allows changes to formulas to instantly impact inventory and production requirements and planning.
- Infinitely configurable, user-definable calculations and user fields allow lab functions to be done in your own style.
- Set up formulas once, then scale to any batch or package size.

Stores/POS

- Easy-to-use cash register application for rapid checkouts.
- Completely integrated with the central system for inventory and pricing control.
- Scanning of items automatically calculates selling price for customer-specific pricing.

Inventory

- Maintain multiple warehouses and track inventory individually or combined.
- Track lots for all items automatically; see where parts came from and where they go.
- Maintain perpetual inventory costing for all items based on FIFO, LIFO, average cost or standard cost.
- Maintain infinite number of locations for each part.
- Maintain and view a permanent part history for each item.
- Maintain item master file with 30-character, alphanumeric part numbers.
- Roll back inventory to any date in time to view quantities and values.
- Maintain history on "non-stock" items.
- Create multilevel bills of material.
- View WIP as of any date.
- Drill down to transactional details from summary views.

Purchasing

- Purchase the same item from multiple vendors with pre-defined pricing.
- Buy items with internal SKU or vendor part number.
- Built-in purchasing analysis and reporting tools.
- Convert vendor units and quantities to your units and quantities automatically.
- Automatically generate 1099 forms.
- Purchase to multiple warehouses and view inventory on-hand at each warehouse.
- Printouts can be grouped with like items on a single line with multiple size descriptions.
- Automatically generate backorders when required.
- View open order reports onscreen.
